

ReactionRX

ReactionRX

ReactionRX

The image shows a mobile application interface for "ReactionRX". At the top, there is a blue toggle switch on the left and a sad face icon on the right. Below these is a dark blue rounded rectangle containing two white input fields. The first field is labeled "Diphenhydramine" and the second is labeled "Drug Name". Both fields have a microphone icon and a minus sign on the right. Below the input fields is a white plus sign. Underneath the plus sign is a list of symptoms: "• Sedation", "• Sleepiness", and "• Dizziness". At the bottom of the dark blue rectangle is a white button labeled "Statistics". Below the dark blue rectangle are two more buttons: a "Reset" button and a button with a question mark.

☐

Diphenhydramine  

Drug Name  

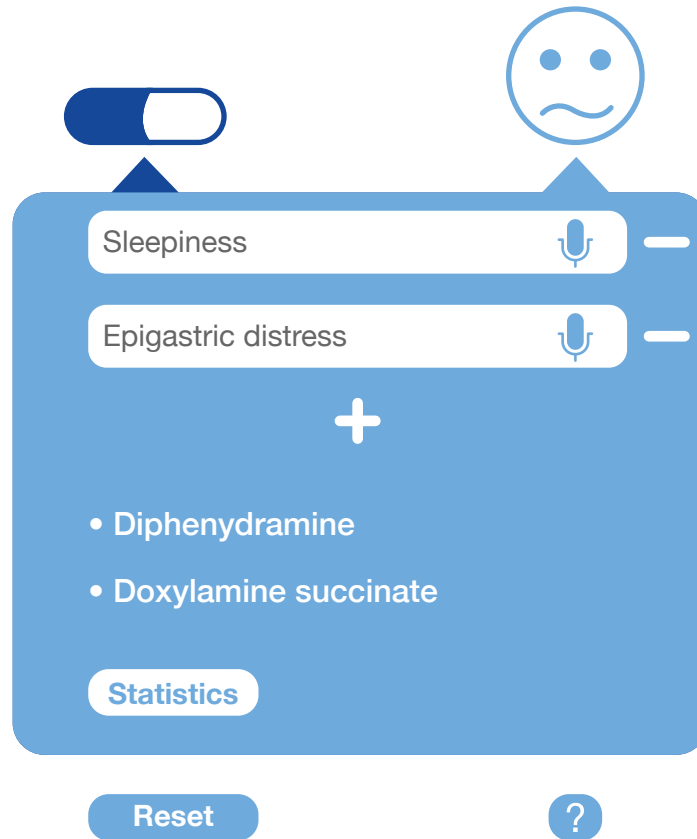

+

- Sedation
- Sleepiness
- Dizziness

ReactionRX

The image shows a mobile application interface for "ReactionRX". At the top, there is a blue pill-shaped toggle switch on the left and a blue circular icon with a sad face on the right. Below these is a dark blue rounded rectangle containing two white input fields. The first field contains the text "Diphenhydramine" and the second contains "Doxylamine succinate". Each field has a blue microphone icon on its right and a minus sign on the far right. Between the two fields is a white plus sign. Below the plus sign is a list of side effects, each preceded by a bullet point. At the bottom of the blue rectangle is a white button with the text "Statistics". Below the blue rectangle is a dark blue pill-shaped button with the text "Reset" and a dark blue circular button with a white question mark.

☐

Diphenhydramine  

Doxylamine succinate  

+

- Sedation
- Sleepiness
- Dizziness
- Disturbed coordination
- Epigastric distress
- Thickening of bronchial secretions
